Implementing Policy

- Unfit for Work
- Reasonable Cause
- Post-Incident Testing
- Refusal to Test

Online Training for Assured Compliance

Corridor works with leading workplace safety and compliance experts to create user-friendly online training programs. Our Alcohol and Drug courses have trained hundreds of thousands of supervisors and employees in workplace environments including transportation, construction, oil & gas, utilities, municipal, healthcare, forestry and mining. Companies rely on Corridor to deliver training that ensures their federal, provincial and regional health and safety regulatory obligations are met and workforces have the right information to perform their work in a safe, responsible manner.

Corridor programs deliver an interactive learning environment proven successful with a variety of learning styles, language skills and educational backgrounds. The system records all course activity by supervisors and employees, tracking their learning progress and compliance status. When the final exam has been passed, the course is marked complete and a certificate is generated for the user's personal recordkeeping.

Compliance Training with Trackable Results

By training all levels of employees, companies are well positioned to demonstrate due diligence and minimize significant legal risk. Corridor's Alcohol and Drug offerings cover employees, and supervisors of both regulated drivers and non-regulated employees. The employee and supervisor regulated driving training version ensures that all aspects of the U.S. DOT regulations are clearly communicated. For review and retraining purposes, Corridor's unique refresher course is available for anyone who has completed the initial supervisor training. Organizations use this learning path as needed to meet future compliance and training requirements.

Support in Real Life Situations

Corridor provides policy guidance to supervisors with practical, real-time resources and support tools for handling common alcohol and drug situations. The detailed procedure resources give supervisors the information they need to manage stressful situations and navigate complex alcohol and drug investigations and testing requirements.

Cannabis Legalization

Canada's legalization of recreational cannabis makes it critical that employees understand how cannabis use can affect the work environment. A new learning module covers the 2018-2019 legislation, how cannabis impacts work performance, how medical cannabis should be managed plus guidance covering company expectations and personal consequences of use. This critical training includes a formal acknowledgment by the employee that they understand the guidelines, to ensure corporate compliance covers this ground breaking legislation.

Certificate of Completion

Administrators are able to monitor employee progress, track compliance certificates & request users to update or refresh training.

Cannabis Legalization

Covers 2018-2019 legislation including edibles, medicinal use, corporate expectations & consequences.
